

ROHIT SHAH

Frontend Engineer - React / Next.js / TypeScript

Lalitpur, Nepal | Open to Remote | 9749801250 | contact.rohitshah.dev@gmail.com | github.com/rohitshah316 | rohitshah.dev

SUMMARY

Frontend engineer focused on React, Next.js, and TypeScript. Independently designed, built, and deployed six production web applications covering authentication, real-time data, state management, and data visualization with a working knowledge of type-safe application architecture from a completed TypeScript project roadmap. Comfortable owning a feature from component design through deployment.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js, Next.js, React Router, Context API, Tailwind CSS, Chart.js

Tools & Platforms: Git, GitHub, Vite, Firebase, Netlify, Vercel, REST APIs

Core Concepts: Type-Safe Component Architecture, Responsive Design, API Integration, State Management, Authentication, Real-Time Data

PROJECTS

Next.js TypeScript Dashboard | *Next.js, TypeScript, React*

Live: nextjs-typescript-dashboard-alpha.vercel.app/ Code: github.com/rohitshah316/nextjs-typescript-dashboard

- Built a type-safe analytics dashboard as the capstone of a 30-project TypeScript roadmap, applying static typing across components, props, and API data models to eliminate a class of runtime errors common in plain JavaScript apps.
- Structured the app with strict typing conventions (interfaces, union types, generics) to keep the codebase self-documenting and safer to refactor.

Next.js Expense Tracker | *Next.js (App Router), Tailwind CSS, Recharts*

Live: <https://next-js-expense-tracker-alpha.vercel.app/dashboard/> Code: <https://github.com/rohitshah316/next-js-expense-tracker>

- Built a client-side expense tracker with persistent local storage, so users' data survives page reloads without a backend.
- Implemented interactive Recharts visualizations to break down spending by category, and a fully responsive layout with Tailwind CSS.

Real-Time Chat App | *React, Firebase (Auth + Firestore)*

Live: <https://rohitshahrealtimechatapp.netlify.app/> Code: <https://github.com/rohitshah316/Real-time-Chat-App.git>

- Implemented Firebase Authentication with protected routing, and live message sync via Firestore listeners for real-time updates without polling.
- Wrote custom React hooks to isolate chat and auth logic from UI components, and added notification sounds for incoming messages.

React Analytics Dashboard | *React, Chart.js, Context API*

Live: <https://rohitshahreactdashboardapp.netlify.app/> Code: <https://github.com/rohitshah316/React-Dashboard-App.git>

- Built a responsive analytics dashboard with Chart.js visualizations and a collapsible sidebar that adapts across breakpoints.
- Used Context API to implement app-wide dark/light theming without prop drilling.

Live demos & source for all projects: rohitshah.dev/projects

EXPERIENCE

Independent Frontend Developer

2026 - Present

- Designed, built, and deployed 6+ production React/Next.js applications end-to-end, from component architecture to live deployment on Vercel and Netlify.
- Integrated third-party services (Firebase Auth, Firestore, REST APIs) and managed application state with Context API and React hooks, following a clean Git/GitHub workflow with public, documented repositories.
- Completed a structured 30-project TypeScript roadmap and applied it in a shipped dashboard project, adopting static typing for safer, more maintainable code.

EDUCATION

Bachelor in Computer Application (BCA)

Tribhuvan University | 2024 - Present
